

WAVE POP UP COUNTER

ASSEMBLY GUIDE

1. This wave tube counter system comes out of the box looking like this.

2. Enclosed in the vinyl and canvas cases are the poles and the counter top. These are the components to build the wave tube system: Counter top, 12 Poles (4 have bungee cords) and graphic.

3. Connect all the bungee corded poles and secure with the snap fasteners.

4. When all the poles are connected it will resemble an S Shape.

5. Assemble the frame by connecting the poles and the frame sides with the same mark/symbols.

6. It is easier if you build one section at a time. Make the ends first, then attach the S shaped poles.

7. Attach the other end.

8. Completed Lastra frame.

9. Place the graphic over the frame.

10. Once the frame is fully covered, pull the zippered flaps underneath the S shaped bottom poles and close the zipper.

11. Completed counter frame with graphic.

12. Place the counter on top of the frame and secure by inserting each sides on the pole.
